## Middleware360 Partners With CloudBees

*Partnership brings strength of technology along with continuous delivery & DevOps expertise to enterprise customers.*

VANCOUVER, British Columbia – Middleware360 Solutions, experts in business automation, system integration solutions, and custom application development, today announced a services partnership with CloudBees, the Enterprise Jenkins Company and continuous delivery (CD) leader. Middleware360 Solutions will provide implementation and training services to its clients who want to adopt continuous delivery practices and are implementing the CloudBees Jenkins Platform as the foundation to do so.

“We are pleased to be working closely with CloudBees, as they support our goal to offer clients continuous delivery solutions that are stable, scalable, flexible and fast,” said Derek Marley, CEO for Middleware360 Solutions. “The CloudBees Jenkins Platform enables enterprises to accelerate the software development process through automation, giving them the ability to build and deploy software faster, while saving time and money,” said Marley.

The CloudBees Jenkins Platform is the industries most proven, fully featured technology platform for implementing continuous integration (CI) and continuous delivery (CD). It extends open source Jenkins with key CloudBees-developed features and capabilities that meet the unique security, scalability and manageability needs of enterprises.

“With Jenkins adoption accelerating, strategic partners like Middleware360 are essential to delivering the enterprise-scale Jenkins solutions customers are seeking,” said Durga Sammeta, senior director of global alliances and channels, CloudBees. “We are excited to partner with Middleware360 as they are uniquely positioned in having the expertise necessary to guide customers through continuous delivery and DevOps transformations, supported by the CloudBees Jenkins Platform.”

Offering end-to-end IT services, Middleware360 is helping clients streamline business processes, increase business flexibility, and decrease system complexity. “We are seeing more organizations looking to invest in continuous delivery as a way to seize opportunities quicker and stretch dollars further, and CloudBees helps to automate and streamline this process. Using the Jenkins platform, we are now capable of innovating in light speed bursts while remaining flexible to try different approaches to solve our client’s challenges. We look forward to many years of collaboration with CloudBees,” said Marley.

### About Middleware360 Solutions, Inc.

Middleware360 Solutions is a dynamic full service partner focused on business automation & integration solutions, custom application development, and IT managed support that delivers accelerated results for cross-industry organizations. Middleware360 offers flexible services encompassing solutions & architecture, project delivery, and application & integration managed support.
